How to use

Diagram of a cell showing a nucleus with a nucleolus and rough ER, and a mitochondrion.

- Close the lid.**
- Carefully close the lid by pulling down until you hear a click.
 - You may hear a rattling sound when opening and closing the lid. This is normal.
- 
- Close the lid.**
- Press the power cord in the container in empty of salad.
 - When the power cord is pressed in, all the food waste has been removed and that water can be added.
- 
- If this dispenser has been shut off automatically, using the power cord from the electrical outlet, wait for this container to cool, and add water.

the dispense button
on the control panel

Parts N a m e s

Re-boil key When the dispenser is in keep-warm mode, use this key to re-boil the water.

Press the re-boil button.
The boil lamp will light.

On a the water has a slight blue-green

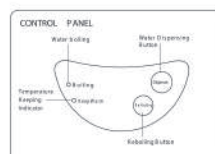

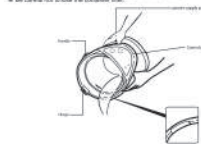

Boiling with light.

- Boiling: a kettle contains water at a lower temperature (e.g. 40°C).
- Boiling: water rises to the water level.
- The kettle is hot: hot water effect: right after.

When not in use

1. Unplug the dispenser and detach the lid.

- ## 2. Pour out remaining water
- Do not avoid getting wet; always detach the lid before pouring out the hot water.
 - Empty the container at least once a day. (Water left in the container can cause rusting, unpleasant odor, and accumulation of mineral deposits.)
 - Do not allow water to splash onto the operation panel, hinges, handle or power supply plug. (Splashed water can cause burns or damage the dispenser.)
 - Be careful not to lose the container filter.
